

Payment Processing Demands Integrity

# IPS MoneyGate™

Virtual Swipe Terminal, Recurring Billing & Ecommerce Gateway

## Take credit cards with your PC instead of a credit card terminal!

- **Your PC can be a “swiped” credit card terminal.**
- **Do recurring billing without storing card numbers.**
- **eCommerce with fraud control.**

### No Terminal Needed...

Just add an inexpensive magnetic strip reader and you have all the credit card equipment you need. No need to buy expensive terminals and no need to accept “FREE” terminals that have long contracts with high cancellation fees.

Note: high speed Internet required.

### Recurring Billing That Is PCI Compliant...

Sensitive credit card information is stored in a secure location off site in a PCI compliant data warehouse. This puts you into PCI compliance which otherwise puts you at risk for fines that could run into the thousands.

### IPS Online Payment Gateway with Enhanced Fraud Control...

Taking charges on the Internet can lead to high levels of fraud and chargebacks. Our fraud control system can save you time, trouble and money. Why expose your business to unnecessary risks?
